

Nut Enuff

2 Shifts

- 3 Rounds of Card collection. Each Round:
 - Fill Conveyor: 4/4/4/4/4/5 cards/player, plus one facedown.
 - All players start “in”. Repeat until only one player is “in”:
 - Players secretly bid how many cards they want from the LEFT of the belt.
 - Reveal bids: lowest “wins” and collects cards. Resolve ties using the token queue.
 - **If this wasn't the final bid for the round**, the card collector may trade one card with any other player.
 - Card collected adds collected cards to Desk: they are now “out”.
 - Final “in” player collects the remaining cards: they cannot trade.
- Packaging
 - Desk cards are assembled into Packages: packages are discarded and points are scored.
- Cleanup
 - Players must move cards from Desk to Floor until they have 3 or fewer cards on Desk.

Final Scoring

Start with VP awarded for packages.

Add VP for Acorns on Desk.

Subtract VP for cards on the floor as follows:

- First 2 cards on Floor: -1 VP each.
- Next 2 cards on Floor: -2 VP each.
- Any further cards on floor: -3 VP each.

E.g. Tim ends the game with 5 cards on the floor: he loses $1 + 1 + 2 + 2 + 3 = 9$ points.
